BUSINESS CASE

Dental healthcare app

Mobile applications for dentists provide simple and convenient management of orders and information about patients. The application allows dentists to view and manage assigned, current and previous appointments with access to post-care notes and recommended treatments.

Solution designed for medical centers

This is the dental healthcare app that's developed to save money, time and potentially a lot of pain too. The app is a whole new way of looking at dentistry, one that is almost entirely from a patient's point of view. The app is designed to deliver convenience, value, transparent pricing and great dental care

TECHNICAL IMPLEMENTATION

Functionality implemented within Android & iOS apps:

- ◆ Ability to create / update users' profiles;
- ◆ Appointment booking for family members;
- ◆ Various payment methods integrated (Stripe, PayPal , Apple /Google pay , Medicare , Afterpay)
- ◆ After-care recommendations;
- ◆ Push notifications to remind patients about their appointment & when dentist is running late;
- ◆ Feedback about the dentist/practice;
- ◆ Integration with Google Maps API, Apple Maps API;
- ◆ SSL encryption for all API requests
